A population of pinealocytes was demonstrated in the rat and rabbit retina. These cells contain either acid or neutral mucopolysaccharide; are found at numerous sites in the rat retina; are evenly distributed over the entire retina and in the ganglion cell layer; are in close association with the neural fiber layer; and are the largest cells in the rat retina. These pinealocytes vary considerably in size. They may be large, moderate sized, or small. They usually have elongated or reniform nucleus and small to moderate-sized nucleoli. They have few rough endoplasmic reticula. The nuclei are more or less well stained. The cytoplasm has a characteristic acidophilic character. This cytoplasmic staining is a consistent finding in a number of species. Pinealocytes are occasionally found in the rabbit retina but they are not as numerous or as large as those in the rat. Building a patient-centered interoperable electronic health record using public APIs: a Health Level Seven - Fast Healthcare Interoperability Resources integration. Clinical data reuse enables the creation of tools for diagnostic and therapeutic decision support that rely on the use of a variety of healthcare records and the representation of this information within a common information space. A critical step in creating such an interoperable electronic health record is the use of current public health data resources, and public health information access services, by the clinical community. The Healthcare Data Interoperability Technical Advisory Committee at Health Level Seven (HL7) has set the stage for public health data interoperability through the development of specifications and software code libraries for integrating and exchanging clinical and public health data. In this article we report on the use of HL7 Fast Healthcare Interoperability Resources (FHIR) to facilitate the integration of public health data into an existing electronic health record. First Impressions: Star Trek Into Darkness Did you like the first film? I hated it. But I didn't like the first one, so I had a better chance of liking this one. What can I say about this movie, other than to say it was not as great as I thought it would be. I mean, it was pretty bad, but with all the hype and excitement from the first movie I expected it to be 6d1f23a050
